### (54) MULTILAYER VESSEL

(57)Abstract:

PURPOSE: To obtain a multilayer vessel which has excellent heat resistance, surface gloss, transparency, gas barrier properties, etc., and dropping strength by extrusion blow molding.

CONSTITUTION: This multilayer vessel comprises an outer layer formed of a polyethylene terephthalate copolymer (a) having inherent viscosity (I.V.) of 1.0-1.5dl/g, a core layer formed of a gas barrier resin (b), and an inner layer formed of the copolymer (a) or polypropylene resin (c) obtained with a metallocene compound as a polymerization catalyst, and is obtained by extrusion blow molding.
